Data Analyst Engineer

Professional Summary

Detail-oriented Data Analyst Engineer with hands-on experience working with complex and unstructured datasets, including JSON and CSV formats. Skilled in transforming messy, real-world data into clean, reliable datasets for analysis and decision-making. Proficient in Python and SQL, with growing expertise in Databricks and distributed data processing using PySpark. Strong understanding of data cleaning, ETL processes, and data quality management.

Technical Skills

- **Languages:** Python, SQL

- **Data Tools:** Databricks, PySpark, Pandas
 - **Databases:** MySQL, NoSQL (MongoDB)
 - **Data Formats:** JSON, CSV
 - **Concepts:** Data Cleaning, ETL Pipelines, Data Transformation, Data Modeling
 - **Version Control:** Git
-

Professional Experience / Projects

Data Analyst Engineer (Projects)

Self-driven & Academic Projects

- Worked extensively with **messy datasets** in JSON and CSV formats, handling issues such as missing values, inconsistent schemas, duplicate records, and nested structures.
 - Used **Python (pandas)** to clean, transform, and preprocess raw data into structured formats suitable for analysis.
 - Parsed and normalized **nested JSON data**, extracting relevant fields and converting them into tabular datasets.
 - Wrote optimized **SQL queries** to extract, filter, and aggregate data from relational databases for reporting and analysis.
 - Built basic **ETL pipelines** to automate data ingestion, cleaning, and transformation processes.
 - Ensured data quality through validation checks and consistent formatting across datasets.
-

Databricks Experience

- Gained hands-on experience using **Databricks** for large-scale data processing.
 - Worked with **PySpark** to process and transform large datasets efficiently.
 - Developed an understanding of **data lake architecture** and distributed computing concepts.
 - Performed data transformations and exploratory analysis within the Databricks environment.
 - Learned performance optimization techniques for handling big data workloads.
-

Key Strengths

- Strong problem-solving skills when dealing with incomplete or inconsistent data
- Ability to turn raw data into meaningful insights
- Continuous learner adapting to modern data tools and technologies
- Attention to detail in ensuring data accuracy and reliability
